DAY 4 WORKSHEET — BUILD A DEMO-READY AGENT

An agent pursues a goal: you own the WHAT, it works out the HOW. Skills are the training, Connectors are the hands, Cowork is the worker.

NAME: _____ DATE: _____

01 THE THREE-WAY DISTINCTION

One sentence each, your own words.

Chat is...

An automation is...

An agent is...

02 DEFINE THE GOAL, NOT THE STEPS

A vague goal produces wandering work — same discipline as a good prompt.

My agent's goal statement (outcome, not steps):

Who this is for / the client scenario it demos:

03 ASSEMBLE IT

SKILL (the training) — the method it must follow, promoted from your Day 2 work:

CONNECTORS / FILES (the hands) — what it needs access to:

WORKER — where it runs (Cowork or your setup tonight):

04 RUN, REVIEW, CORRECT

Let it run. Then do the strategist's job.

- [ ] I watched it work through a SEQUENCE of steps, not just one answer.
- [ ] I reviewed the output before accepting it — the review step IS the job.
- [ ] I corrected at least one thing and ran it again.
- [ ] I saved the assembly so I can rerun it for any future client.

What it produced, and the one correction you made:

05 THE PORTFOLIO LINE

Finish the sentence you'll say to a prospect: "I built an AI agent that..."

(Optional — AI team upgrade) Which two specialists would you chain, and who hands off to whom?

COACH'S NOTE — The agent handles volume. You handle judgment. That's why you're the strategist — and tomorrow this build gets a name and a price.
